Board of Pension Trustees State of Delaware McArdle Building 860 Silver Lake Boulevard, Suite 1 Dover, Delaware 19904

Dear Members of the Board:

At your request, we have conducted the annual actuarial valuation of the Delaware State Volunteer Firemen's Pension Plan (Plan) as of June 30, 2014. The results of this valuation are contained in this report. The purpose of the valuation is discussed in the Foreword.

This report contains information on plan assets and liabilities, as well as analyses combining asset and liability performance and projections. It also discloses employer contribution levels and required disclosures under the Governmental Accounting Standards Board Statement (GASB) No. 67.

In completing the valuation and preparing our report, we relied on information, some oral and some written, supplied by staff of the Office of Pensions. This information includes, but is not limited to, the plan provisions, employee data, and financial information. We performed an informal examination of the obvious characteristics of the data for reasonableness and consistency in accordance with Actuarial Standard of Practice No. 23.

The contribution results of this report are only applicable to the Delaware State Volunteer Firemen contributions for Fiscal Year (FY) 2015 and rely on future Plan experience conforming to the underlying assumptions. To the extent that actual Plan experience deviates from the underlying assumptions, the results would vary accordingly.

To the best of our knowledge, this report and its contents have been prepared in accordance with generally recognized and accepted actuarial principles and practices that are consistent with the Code of Professional Conduct and applicable Actuarial Standards of Practice set out by the Actuarial Standards Board. Furthermore, as credentialed actuaries, we meet the Qualification Standards of the American Academy of Actuaries to render the opinion contained in this report. This report does not address any contractual or legal issues. We are not attorneys and our firm does not provide any legal services or advice.

This report was prepared for the Delaware State Volunteer Firemen's Pension Plan for the purposes described herein and for the use by the Plan auditor in completing an audit related to the matters herein. This valuation report is not intended to benefit any third party, and Cheiron assumes no duty or liability to any such party.

Sincerely, Cheiron

Fiona E. Liston, FSA Principal Consulting Actuary Elizabeth Wiley, FSA, EA Consulting Actuary Margaret A. Tempkin, FSA Principal Consulting Actuary

FOREWORD

Cheiron has performed the annual actuarial valuation of the Delaware State Volunteer Firemen's Pension Plan (Plan) as of June 30, 2014. The purpose of this report is to:

- 1) **Measure and disclose**, as of the valuation date, the financial condition of the Plan;
- 2) **Indicate trends** in the financial condition of the Plan;
- 3) **Determine the contribution rate** to be paid by the employers for Fiscal Year (FY) 2015; and
- 4) **Provide** accounting statement information.

An actuarial valuation establishes and analyzes plan assets and liabilities on a consistent basis and traces the progress of both from one year to the next. It includes measurement of the plan's investment performance as well as an analysis of liability gains and losses.

Section I presents a summary containing our findings and disclosing important trends experienced by the Plan in recent years.

Section II contains details on various asset measures, together with pertinent performance measurements.

Section III shows similar information on liabilities, measured for actuarial, accounting, and governmental reporting purposes.

Section IV presents the FY 2015 actuarially determined contribution for participating employers.

Section V includes the required disclosures under Governmental Accounting Standards Board (GASB) Statement No. 67 and items recommended by the Government Finance Officers Association (GFOA).

The appendices to this report contain a summary of the Plan's membership at the valuation date, a summary of the major provisions of the Plan, and a summary of the actuarial methods and assumptions used in the valuation.

The actuarial assumptions reflect our understanding of the likely future experience of the Plan, and the assumptions individually and as a whole represent our best estimate for the future experience of the Plan. The results of this report are dependent upon future experience conforming to these assumptions. To the extent that future experience deviates from the actuarial assumptions, the true cost of the Plan would vary from our results.

SECTION I BOARD SUMMARY

General Comments

The actuarially determined contribution (ADC) amount increased from \$2,012,700 for FY 2014 to \$2,074,600 for FY 2015.

During the year ended June 30, 2014, the Plan's assets earned 14.9% on a market value basis. However, due to the Plan's asset smoothing method, which recognizes only a portion of the investment gains and losses, the return on an actuarial value basis was 9.5%. This return was greater than the assumed investment rate of return of 7.5% for last year, resulting in an actuarial gain on investments of \$311 thousand. Note that this comparison will be made against the revised 7.2% assumption next year due to the investment rate of return assumption change.

The Plan experienced an actuarial gain on plan liabilities resulting from members retiring, terminating, becoming disabled, and dying at rates different from the actuarial assumptions. This liability gain decreased the actuarial liability by \$230 thousand, 0.7% of the total actuarial liability. This type of relatively small gain or loss is normal in the course of plan experience, as we cannot predict exactly how people will behave.

This valuation reflects changes in both liability and asset measurements due to a reduction in the assumed investment rate of return from 7.5% to 7.2%. This assumption change, combined with offsetting adjustments to inflation assumptions, increased the actuarial liability measurement by \$1,457 thousand. As a partial offset to this liability impact, an additional 30% of the remaining balance of past investment gains was included in the measurement of the actuarial value of assets at the June 30, 2014 valuation. This additional amount represents \$170 thousand of the total \$311 thousand investment gain reported above.

This valuation report also contains information to be reported in the June 30, 2014 Comprehensive Annual Financial Report (CAFR) of the Delaware Public Employees' Retirement System (Delaware PERS) under the new GASB Statement No. 67 as well as additional disclosure information recommended by the Government Finance Officers Association (GFOA). The GASB disclosures are based on the use of updated procedures to roll forward the 2013 actuarial valuation liability results. The 2013 liability results, used as the starting point for this roll forward, include the changes in the investment rate of return and inflation assumptions, first included for funding in this 2014 report, and as such are higher than the funding numbers provided in the 2013 valuation report. The calculation of net pension liability in Section V is shown as disclosed for the plan year June 30, 2014, based on the 2013 actuarial valuation liability results. We also present a projection of the June 30, 2015 disclosure in Section V, assuming all actuarial assumptions are met over the coming year, which is based on the 2014 actuarial valuation liability results.

There was an increase in the Plan's UAL over what would otherwise be expected due to employers contributing less than the ADC amount for the year. The anticipated ADC for the Fiscal Year ending June 30, 2014 was \$2,013 thousand. Employers actually made contributions

SECTION I BOARD SUMMARY

totaling \$1,561 thousand. This will remain a source of future losses as long as the employer contributions are less than the ADC.

As of the June 30, 2014 actuarial valuation, the Plan's unfunded actuarial liability (UAL) was \$16.1 million. This is an increase from the \$15.3 million UAL in the funding valuation for the prior year.

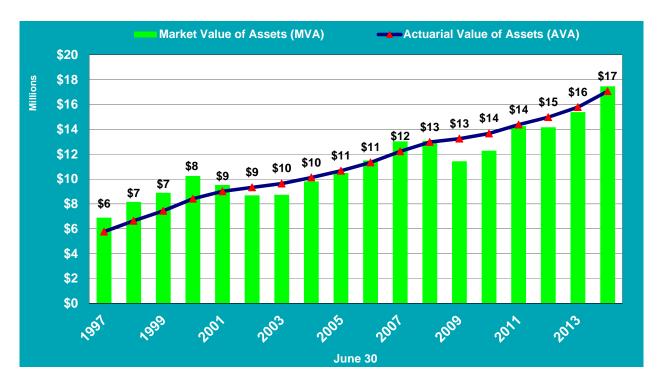

SECTION I BOARD SUMMARY

Trends

Growth in Assets

The graph below shows measurements of the Plan's assets over the last 18 years based on both market values and actuarial values. The green bars represent the market value measurements, while the blue line shows the actuarial value measurements. The black numbers are the actuarial value of asset measurements as of the valuation date for each year, in millions of dollars.

The market value of assets (MVA) returned 14.9% over the last year. The determination of the Plan's actuarial value of assets (AVA) for the current year reflects a portion of the return above the 7.5% assumed for the year, continued recognition of prior years' gains and losses, and an additional 30% of the remaining unrecognized investment gains recognized as a partial offset of the assumption changes.

Over the period July 1, 1997 to June 30, 2014, the Plan's assets returned approximately 8.7% per year measured on an actuarial value basis, compared to the current valuation assumption of 7.2%.

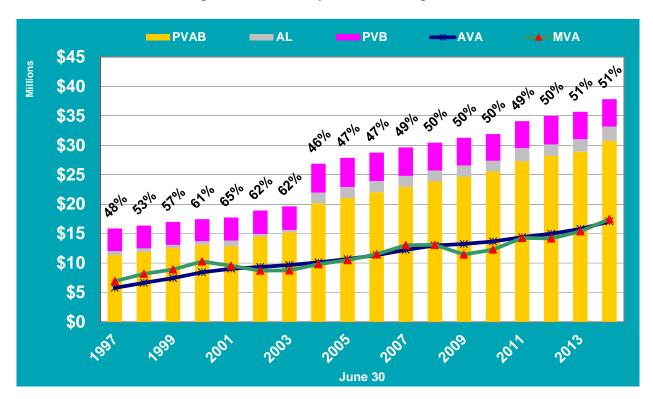

SECTION I BOARD SUMMARY

Assets and Liabilities

The three colored bars below represent the three different measures of liability discussed in this report. The first measure is given by the yellow bars, the present value of accrued benefits (PVAB). The PVAB values represent the value of all benefits earned by current members through the valuation date. These values do not reflect any future additional service or salary increases for current members.

The second liability measure is the one currently used for the Plan's funding target, the actuarial liability (AL). These target amounts are represented by the top of the gray bars. The funded ratios reported by the Plan are the percentages shown above the bars and are developed by comparing these target measurements of liability to the actuarial value of assets at each valuation date. This measurement is also the basis of the liability measure used in GASB 67.

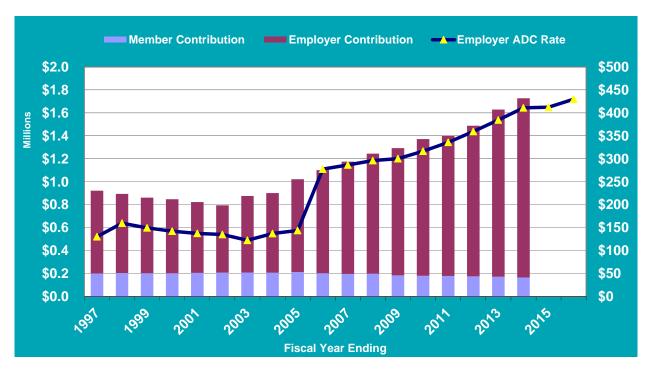

The amount represented by the top of the pink bars, the present value of future benefits (PVB), is the amount needed to provide all benefits for the current members and their beneficiaries, including reflection of assumed future service and pay increases. If the Plan had assets equal to the PVB as of a certain date, no additional contributions would, in theory, be needed for the current members if all assumptions were exactly met from that point forward.

SECTION I BOARD SUMMARY

Contribution Rates

The stacked bars in the graph above show the contributions made by the employers and the members for each fiscal year, and are read using the left-hand scale. The employer contributions amount shown in purple represent what was actually paid. The blue line shows the employers' per-head actuarially determined contribution (ADC) amount for each fiscal year (right-hand scale).

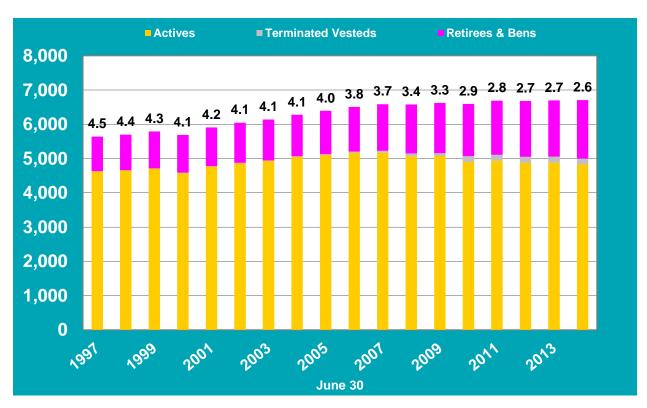

The member contribution rate is set by State law, based on the Plan in which the member participates. The participating employer ADC amount is set by the actuarial process.

SECTION I BOARD SUMMARY

Participant Trends

The bars below show the number of members as of each valuation date, divided between active members, terminated vested members, and retirees/beneficiaries. These bars are read using the left-hand scale. The graph below shows that the number of active members has been dropping in recent years, while there has been a slight increase in the number of inactives over recent years. The numbers that appear above each bar represent the ratio of active members to inactive members (retirees, beneficiaries, and terminated vested members) at each valuation date. The active-to-inactive ratio has decreased from 4.5 actives to each inactive in 1997 to 2.6 actives for each inactive today.

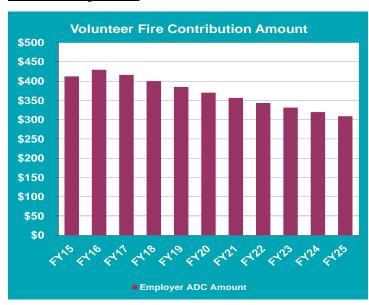

SECTION I BOARD SUMMARY

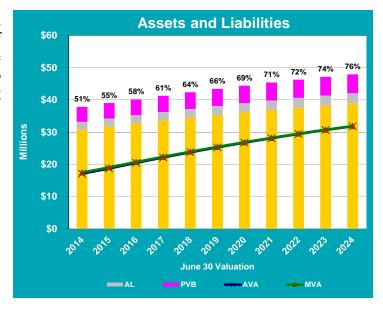

Future Outlook

Baseline Projections

These graphs show the expected progress of the Plan over the next ten years, assuming the Plan's assets earn 7.2% on a *market value* basis and assuming all assumptions are exactly met, including that the ADC amounts are made in full. The chart entitled "Volunteer Fire Contribution Amount" shows that the employer ADC amount per head is expected to decrease annually over the decade, absent further gains or losses. This pattern may be impacted by the phase-in to employer contributions equal to the full actuarially determined rates.

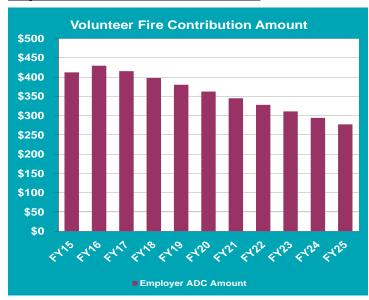

The "Assets and Liabilities" graph shows the projected funded ratios of the Plan over the next ten years. The Plan's funded status is projected to improve annually as the existing unfunded liability is paid off.

SECTION I BOARD SUMMARY

Projections with Asset Returns of 8.2%

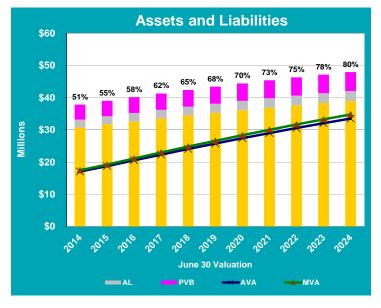

The Plan's investment earnings will affect the future funding status of the Plan. These two graphs show what the next ten years would be expected to look like if the Plan's investment performance is 8.2% each year, 1.0% higher than the valuation investment rate of return assumption.

These two graphs assume all other assumptions are exactly met, including employer contributions equal to the full actuarially determined amounts.

The "Volunteer Fire Contribution Amount" graph shows that the employer ADC amount per head under this scenario decreases even more than the baseline scenario, dropping below \$278 per head at the end of the projected period.

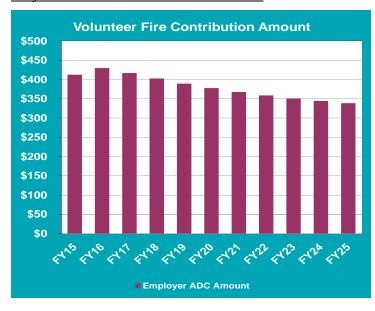

The "Assets and Liabilities" graph shows that the Plan would reach an 80% funded ratio by 2024 under this scenario, an improvement over the baseline scenario's 76%.

SECTION I BOARD SUMMARY

Projections with Asset Returns of 6.2%

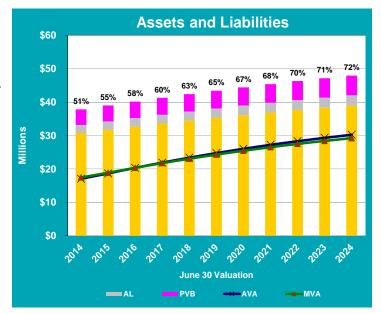

The graphs on this page show projections of the Plan's funding status assuming the Plan's investment performance is 6.2% each year of the projection, 1.0% lower than the valuation investment rate of return assumption. While the current remaining unrecognized gains would cushion the new annual losses for a period, eventually the new losses would result in the funded ratio dropping and the required contributions increasing compared to the baseline scenario. This effect demonstrates the importance investment earnings on the Plan's future funding needs.

Note that these projections assume all other assumptions are exactly met, including payment of participating employer contributions equal to the full actuarially determined contribution.

Under this scenario, the employer ADC amount increases to approximately \$339 per head, compared to \$309 per head in the baseline, and the funded ratio as of 2024 decreases to 72%, compared to 76% in the baseline scenario.

The projection of this scenario shows an increase in the Plan's funded status from 51% to 72% by the end of the period. The improvement in funded status is driven by the assumption that contributions are being made towards paying down the UAL. If actual contributions continue to come in at less than the ADC amount, this improvement may not occur.

SECTION I BOARD SUMMARY

Table I-1 Summary of Principal Plan Results						
Valuation as of:	Ju	ne 30, 2013	Jı	une 30, 2014	% Change	
Member Counts						
Active Members		4,882		4,828	(1.11%)	
Retirees and Members		1,634		1,702	4.16%

Administrative Expense		32,200		34,100		
Actuarially Determined Contribution (ADC)	\$	2,012,700	\$	2,074,600		

SECTION II ASSETS

Pension plan assets play a key role in the financial operation of the plan and in the decisions that the Trustees may make with respect to future deployment of those assets. The level of assets, the allocation of assets among asset classes, and the methodology used to measure assets will likely affect benefit levels, employer actuarially determined contributions, and the ultimate security of members' benefits.

In this section, we present detailed information on the Plan's assets including:

- **Disclosure** of the Plan's assets at June 30, 2013 and June 30, 2014;
- Statement of the **changes** in market values during the year;
- Development of the **actuarial value of assets**;
- An assessment of investment performance; and
- A projection of the Plan's expected **cash flows** for the next ten years.

Market Value of Assets Disclosure

The market values of assets represent "snap-shot" or "cash-out" values that provide the principal basis for measuring financial performance from one year to the next. However, market values can fluctuate widely with swings in the marketplace, and as such are usually not suitable for budgeting and long-range planning.

Table II-1 below shows the market values as of June 30, 2013 and June 30, 2014, along with the changes between the two.

Table II-1 Changes in Market Values of Assets					
Market Value of Assets – June 30, 2013			\$	15,384,500	
Additions Member Contributions Employer Contributions Investment Returns Total Additions	\$ \$	166,100 1,561,300 2,271,500 3,998,900			
Deductions Benefit Payments Administrative Expenses Total Deductions	\$ \$	1,886,900 34,100 1,921,000			
Market Value of Assets – June 30, 2014			\$	17,462,400	

SECTION II ASSETS

Actuarial Value of Assets

The actuarial value of assets represents a "smoothed" value developed by the actuary to reduce, or eliminate, erratic results that could develop from short-term fluctuations in the market value of assets. The actuarial value for this plan equals the expected actuarial value of assets, developed from the immediately prior valuation, plus 20% of the difference between the actual market value of assets and that expected actuarial value of assets at the valuation date. For this June 30, 2014 valuation, the actuarial value of assets also recognizes an additional 30% of past deferred gains to partially offset the increases in liability and normal cost resulting from the reduction of the investment rate of return assumption from 7.50% to 7.20%. The table below illustrates the calculation of the actuarial value of assets as of June 30, 2014.

	Table II-2	
	Development of Actuarial Value of Assets	
1.	Actuarial Value of Assets at June 30, 2013	\$ 15,773,100
2.	Amount in (1) with interest to June 30, 2014 at 7.50% per year	\$ 16,956,000
3.	Employer and member contributions for the Plan Year ended June 30, 2014	1,727,400
4.	Interest on contributions assuming payments made uniformly throughout the year to June 30, 2014 at 7.50% per year	64,800
5.	Disbursements from Trust except investment expenses, July 1, 2013 through June 30, 2014	1,921,000
6.	Interest on disbursements to June 30, 2014 at 7.50% per year	 72,000
7.	Expected Actuarial Value of Assets at June 30, 2014 $= (2) + (3) + (4) - (5) - (6)$	\$ 16,755,200
8.	Actual Market Value of Assets at June 30, 2014	\$ 17,462,400
9.	Excess of (8) over (7)	707,200
10.	Additional 30% Recognition of Past Deferred Gains = 30% of 80% of (9)	 169,700
11.	Actuarial Value of Assets at June 30, 2014 $= (7) + 20\%$ of $(9) + (10)$	\$ 17,066,300

SECTION II ASSETS

Investment Performance

The market value of assets (MVA) returned 14.9% during 2014, which is greater than the assumed 7.5% investment rate of return. The actuarial value of assets (AVA) returned 9.5% over this same year, including reflecting the additional 30% recognized due to the assumption changes adopted and the standard asset smoothing method being utilized by the Plan for the measurement of the actuarial value of assets. Since only 20% of the gain or loss from the performance of the Plan is typically recognized in a given year under the asset smoothing method, in periods of very good performance, the AVA can lag significantly behind the MVA, and in a period of negative returns, the AVA does not decline as rapidly as the MVA.

Projection of Cash Flows

Table II-3 Cash Flow Projections						
Year Beginning July 1,	Expected Benefit Payments	Expected Contributions*				
2014	\$ 1,899,000	\$ 2,280,000				
2015	1,979,000	`2,364,000				
2016	2,081,000	2,364,000				
2017	2,187,000	2,364,000				
2018	2,287,000	2,364,000				
2019	2,383,000	2,364,000				
2020	2,483,000	2,364,000				
2021	2,584,000	2,364,000				
2022	2,690,000	2,364,000				
2023	2,789,000	2,364,000				

^{*} Expected contributions include employer contributions and member contributions. For illustration purposes, we have assumed the employer contribution rate will remain level from FYE 2015 and do not reflect the continued phase-in to paying the full actuarially calculated amount.

Expected benefit payments are projected for the closed group valued at June 30, 2014. Projecting any farther than ten years using a closed group would not yield reliable projections due to the omission of new hires in the benefit payments, compounded by their inclusion in the expected contributions.

SECTION III LIABILITIES

In this section, we present detailed information on the Plan's liabilities including:

- **Disclosure** of the Plan's liabilities at June 30, 2013 and June 30, 2014; and
- Statement of **changes** in these liabilities during the year.

Disclosure

Three liability measurements are calculated and presented in this report. Each type is distinguished by the purpose, or purposes, for which they are used.

- **Present Value of Benefits (PVB):** Used for analyzing the financial outlook of plans, this represents the amount of money needed today to pay off fully all future benefits and expenses of a plan, assuming current members continue to accrue benefits and there are no new entrants.
- Actuarial Liability (AL): Used for funding calculations and GASB disclosures, this liability is calculated by taking the present value of benefits (PVB) and subtracting the present value of future member contributions (PVFEEC) and the present value of future employer normal costs (PVFNC) under an acceptable actuarial funding method. This Plan uses the Entry Age Normal funding method.
- **Present Value of Accrued Benefits (PVAB):** Used for communicating the current level of liabilities, this liability represents the total amount of money needed today to pay off fully the current accrued obligations of a plan, assuming no future accruals of benefits. These liabilities are also required for some accounting purposes (Topic No. 960) and are sometimes used as part of assessing whether a plan can meet its current benefit commitments.

The following table discloses each of these liabilities for the current and immediately prior valuations. With respect to each disclosure, a subtraction of an appropriate value of plan assets yields, for each respective type, either a net surplus or an unfunded amount.

SECTION III LIABILITIES

Table III-1						
Liabilities and Net (Surplus)/Unfunded Amounts						
	Ju	ne 30, 2013	June 30, 2014			
Present Value of Benefits						
Active Member Benefits	\$	19,666,300	\$	20,801,500		
Retiree, Beneficiary, Disabled, and Terminated						
Members Benefits		16,011,400		17,039,600		
Present Value of Benefits (PVB)	\$	35,677,700	\$	37,841,100		
Market Value of Assets (MVA)	\$	15,384,500	\$	17,462,400		
Future Member Contributions		2,262,000		2,268,000		
Future Employer Contributions		18,031,200		18,110,700		
Total Resources	\$	35,677,700	\$	37,841,100		
Actuarial Liability						
Present Value of Benefits (PVB)	\$	35,677,700	\$	37,841,100		
Present Value of Future Employer Normal Costs (PVFNC)		2,375,100		2,381,400		
Present Value of Future Member Contributions (PVFEEC)		2,262,000		2,268,000		
Actuarial Liability (AL=PVB-PVFNC-PVFEEC)	\$	31,040,600	\$	33,191,700		
Actuarial Value of Assets (AVA)		15,773,100		17,066,300		
Net (Surplus)/Unfunded AL (AL – AVA)	\$	15,267,500	\$	16,125,400		
Present Value of Accrued Benefits						
Present Value of Benefits (PVB)	\$	35,677,700	\$	37,841,100		
Present Value of Future Benefit Accruals (PVFBA)		6,757,400		7,089,200		
Present Value of Accrued Benefits (PVAB=PVB-PVFBA)	\$	28,920,300	\$	30,751,900		
Market Value of Assets (MVA)	\$	15,384,500	\$	17,462,400		
Net (Surplus)/Unfunded PVAB (PVAB – MVA)	\$	13,535,800	\$	13,289,500		

SECTION III LIABILITIES

Changes in Liabilities

Each of the liabilities disclosed in the prior table are expected to change at each valuation. The components of that change, depending upon which liability is analyzed, can include:

- New entrants since the last valuation
- Benefits accrued since the last valuation
- Plan amendments increasing benefits
- Passage of time which adds interest to the prior liability
- Benefits paid to retirees since the last valuation
- Participants retiring, terminating, or dying at rates different than expected
- A change in actuarial assumptions
- A change in actuarial method

Unfunded liabilities (or surpluses) will change because of all of the above as well as due to changes in plan assets resulting from:

- Employer contributions different than expected
- Investment earnings different than expected
- A change in the method used to measure plan assets

In each valuation, we report on those elements of change that are of particular significance, potentially affecting the long-term financial outlook of the Plan. Below we present key changes in liabilities since the last valuation.

	Table III-2 Liability Changes		
(In Thousands)	Present Value of Benefits	Actuarial Liability	Present Value of Accrued Benefits
Liabilities June 30, 2013	\$ 35,678	\$ 31,041	\$ 28,920
Liabilities June 30, 2014	37,841	33,192	30,752
Liability Increase (Decrease)	2,163	2,151	1,832
Change Due to:			
Assumption Changes	1,563	1,457	1,050
Actuarial (Gain)/Loss	NC*	(289)	NC*
Benefits Accumulated and			
Other Sources	600	983	782

^{*} NC = not calculated

SECTION III LIABILITIES

Table III-3 below provides additional information about the liability measurements for funding purposes as of both the current and the immediately prior valuations.

	Table III-3 Actuarial Liabilities for Funding							
	June 30, 2013 June 30, 2014							
1.	Actuarial Liabilities							
	Retiree, Beneficiary, Disabled, and	\$	16,011,400	\$	17,039,600			
	Terminated Members Benefits							
	Active Members		15,029,200		16,152,100			
	Total Actuarial Liability	\$	31,040,600	\$	33,191,700			
2.	Actuarial Value of Assets	\$	15,773,100	\$	17,066,300			
3.	Unfunded Actuarial Liability (UAL)	\$	15,267,500	\$	16,125,400			

SECTION IV CONTRIBUTIONS

In the process of evaluating the financial condition of any pension plan, the actuary analyzes the assets and liabilities to determine what level, if any, of contributions are needed to properly maintain the funding status of the plan. Typically, the actuarial process will use a funding technique that will result in a pattern of contributions that are both fairly stable and predictable.

For this Plan, the funding method employed is the **Entry Age Normal** actuarial funding method. Under this method, there are three components to the total contribution: the **normal cost contribution**, the **unfunded actuarial liability contribution** (UAL contribution), and the **administrative expense contribution**.

The normal cost contribution rate is determined in the following steps. First, for each active member an individual normal cost rate is determined by taking the value, as of entry age into the Plan, of that member's projected future benefits and dividing it by the value, also at entry age, of the member's projected future service. Then, this total normal cost rate is reduced by the member contribution rate to produce the employer normal cost amount for each member. The employer normal cost amount for each active member equals the sum of the employer normal cost amounts for all active members.

The actuarial liability is that portion of the present value of projected benefits that will not be paid by future employer normal cost contributions or member contributions. The difference between this liability and the funds accumulated as of the same date is referred to as the unfunded actuarial liability (UAL).

The UAL contribution rate is calculated by amortizing this UAL over a 15-year open period.

The assumed administrative expense is equal to the actual administrative expenses charged in the prior year. This amount is intended to provide an allowance above the cost of funding the benefits to pay for the expense of operating the Plan.

The table below presents and compares the employer contribution amounts for the Plan for this valuation and the immediately prior one.

Table IV-1 Employer Contribution Amounts							
June 30, 2013 June 30, 2014							
Entry Age Normal Cost Amount	\$ 307,600	\$ 304,200					
UAL Amortization Payment	1,672,900	1,736,300					
Administrative Expense	32,200	34,100					
Actuarially Determined Contribution	\$ 2,012,700	\$ 2,074,600					

SECTION IV CONTRIBUTIONS

Table IV-2 below provides additional detail about the development of the expected employer contribution amount for FY 2015.

Table IV-2 Expected FY 2015 Employer Contributions						
Employer Contributions	I	n Dollars				
 Present Value of Projected Benefits Attributable to: a. Total Normal Cost b. Expected Members Contribution c. Employer Paid Normal Cost (a) – (b) 	\$ \$	593,900 289,700 304,200				
2. Amortization of Unfunded Liability		1,736,300				
3. Allowance for Administrative Expense		34,100				
4. Total Employer Actuarially Determined Contribution Amount (1) + (2) + (3)	\$	2,074,600				

SECTION V ACCOUNTING STATEMENT INFORMATION

ASC Topic No. 960 of the Financial Accounting Standards Board (FASB) requires plans subject to it to disclose certain information regarding its funded status. Statement No. 67 of the Governmental Accounting Standards Board (GASB) establishes standards for disclosure of pension information by public employee retirement systems (PERS) and governmental employers in notes to financial statements and supplementary information.

Disclosures based on FASB ASC Topic No. 960 provide a quasi "snap shot" view of how the Plan's assets compare to its liabilities if contributions stopped and accrued benefit claims had to be satisfied. However, due to potential legal requirements and the possibility that alternative interest rates would have to be used to determine the liabilities, these values may not be a good indication of the amount of money it would take to buy the benefits for all members if the Plan were to terminate.

FASB ASC Topic No. 960 specifies that a comparison of the present value of accrued (accumulated) benefits with the market value of the assets as of the valuation date must be provided. The relevant amounts as of June 30, 2013 and June 30, 2014 are exhibited in Table V-1 which also includes a reconciliation of liabilities determined as of the prior valuation, July 1, 2013, to the liabilities as of June 30, 2014.

This valuation contains information reported in the June 30, 2014 Comprehensive Annual Financial Report (CAFR) of Delaware PERS under the new GASB Statement No. 67. Disclosures are based on the use of updated procedures to roll forward the 2013 valuation results. The 2013 starting point is higher than the funding numbers from 2013, because it includes the reduction in the assumed investment return, which was first effective for funding purposes in the 2014 valuation. The calculation of Net Pension Liability in Table V-2 shows the amounts disclosed for the plan year June 30, 2014, based on the updated 2013 liability valuation, as well as a projection of the anticipated June 30, 2015 disclosures, based on 2014 liability valuations, assuming all actuarial assumptions are met over the coming year.

Tables V-3 through V-5 are exhibits to be used for the System's CAFR. Table V-3 is the Note to Required Supplementary Information, Table V-4 is a history of gains and losses in accrued liability, and Table V-5 is the Solvency Test, which shows the portion of accrued liability covered by assets. This valuation does not contain any information reported based on the new GASB Statement No. 68 that will be effective for the employers beginning in their Fiscal Year 2015 CAFR.

Items printed in red will be replaced with actual amounts once known at the end of FY 2015.

Note that GASB Statement No. 67 requires that the level percent of payroll version of Entry Age Normal calculations be used, even when benefits are not related to salary. For this reason, the figures shown for the GASB 67 disclosures above will not agree with those shown elsewhere in this report relating to funding.

SECTION V ACCOUNTING STATEMENT INFORMATION

Table V-3 Note to Required Supplementary Information

The information presented in the required supplementary schedules was determined as part of the actuarial valuation at the date indicated. Additional information as of the latest actuarial valuation follows:

Valuation date July 1, 2014

Actuarial cost method Entry age

Amortization method Level dollar, 15-year open

Remaining amortization period 15 years

Asset valuation method 5-Year smoothed market

Actuarial assumptions:

Investment rate of return* 7.2%
Projected salary increases N/A
Cost-of-living adjustments ad hoc

*Includes inflation at 3.00%

The actuarial assumptions used have been recommended by the actuary and adopted by the Plan's Board of Trustees based on the most recent review of the Plan's experience completed in 2011. The Board of Trustees further modified the investment rate of return and inflation assumptions for the 2014 Plan Year.

The rate of employer contributions to the Plan is composed of the normal cost, amortization of the unfunded actuarial liability and an allowance for administrative expenses. The normal cost is a level dollar amount which, along with member contributions, will pay for projected benefits at retirement for each active plan participant. The actuarial liability is that portion of the present value of projected benefits that will not be paid by future employer normal costs or member contributions. The difference between this liability and the funds accumulated as of the same date is the unfunded actuarial liability. The allowance for administrative expenses is based upon the Plan's actual administrative expenses.

APPENDIX A MEMBERSHIP INFORMATION

Delaware State Volunteer Firemen's Pension Plan Annual Benefit Distribution of Vested Members as of June 30, 2014

APPENDIX B ACTUARIAL ASSUMPTIONS AND METHODS

A. Long-Term Assumptions Used to Determine Plan Costs and Liabilities

1. Demographic Assumptions

a. Healthy Active and Inactive Mortality

Mortality Improvements Projected to 2015 (Projection Scale AA)

Male: RP-2000 Combined Mortality Table Female: RP-2000 Combined Mortality Table

Rates of	Rates of Healthy Active and Inactive Mortality Rates (With Projection Scale AA)								
Age	Male	Female							
20	0.03%	0.02%							
25	0.03	0.02							
30	0.04	0.02							
35	0.07	0.04							
40	0.10	0.06							
45	0.12	0.09							
50	0.16	0.13							
55	0.27	0.24							
60	0.53	0.47							
65	1.03	0.90							
70	1.77	1.55							
75	3.06	2.49							
80	5.54	4.13							
85	9.97	7.08							
90	17.27	12.59							

b. Termination of Employment (Prior to Normal Retirement Eligibility)

10-year Select (age- and service based) & Ultimate (age-based) Tables

Age						Servio	e				
Select:	0	1	2	3	4	5	6	7	8	9	Ultimate
<55	50.00%	6.00%	5.50%	5.00%	4.50%	4.00%	4.00%	3.50%	3.50%	1.50%	0.50%
55+	25.00%	6.00%	5.50%	5.00%	4.50%	4.00%	4.00%	3.50%	3.50%	1.50%	0.50%

APPENDIX B ACTUARIAL ASSUMPTIONS AND METHODS

c. Retirement

Normal Retirement: one-year Select & Ultimate (age-based) upon attaining age 60 with completion of ten years of service:

Male Normal Retirement								
Age	Select	Ultimate						
<61	70.00%	0.00%						
61-69	40.00	30.00						
70-79	100.00	30.00						
80+	100.00	100.00						

Female Normal Retirement								
Age	Select	Ultimate						
<61	70.00%	0.00%						
61-64	45.00	35.00						
65-69	50.00	35.00						
70-79	70.00	35.00						
80+	70.00	100.00						

d. Salary Increase

Not applicable. Salary is not a component of this Plan.

2. Economic Assumptions

a. Investment Rate of Return: 7.20% b. General Wage Increase Rate: N/A

c. Annual Cost-of-Living Increase Rate for Retirees: 0.00%

d. Total Payroll Increase Rate

(for Amortization): N/A

e. Administrative Expenses: Assume following year's expense will equal

allocation of administrative expenses made

in the prior year.

3. Changes Since Last Valuation

Based upon adoption by the Board of Pension Trustees, the following assumptions were changed:

Investment Rate of Return was reduced from 7.5% to 7.2%.

General Wage Increase Rate was reduced from 3.25% to 3.00%.

Total Payroll Increase Rate (for Amortization) was reduced from 3.25% to 3.00%.

APPENDIX B ACTUARIAL ASSUMPTIONS AND METHODS

B. Actuarial Methods

1. Funding Method

The Entry Age Normal funding method is used to determine costs. Under this funding method, a normal cost is determined as the level dollar amount for each active member. The normal cost plus member contributions will pay for projected benefits at retirement for each active plan participant.

The actuarial liability is that portion of the present value of projected benefits that will not be paid by future employer normal costs or member contributions. The difference between this liability and funds accumulated as of the same date is referred to as the unfunded actuarial liability.

The portion of the actuarial liability in excess of plan assets is amortized to develop an additional cost or savings that is added to each year's employer normal cost. Under this cost method, actuarial gains and losses are directly reflected in the size of the unfunded actuarial liability.

The portion of unfunded liability is amortized over a rolling 15-year period. The unfunded liability was being amortized by annual payments over a 40-year period from July 1, 1987 until July 1, 2013, at which time the funding method was moved to a 15-year open period.

For purposes of the GASB 67 disclosures, the Entry Age Normal funding method assuming a level percentage of pay is used. For this method, the pay increase assumption is the underlying inflation rate of 3%.

2. Actuarial Value of Assets

For purposes of determining the employer contribution rate to the Plan, we use an actuarial value of assets. The asset smoothing method dampens the volatility in asset values that could occur because of fluctuations in market conditions. Use of an asset smoothing method is consistent with the long-term nature of the actuarial valuation process.

The actuarial value of assets is a weighted average giving 20% weight to the current market value and 80% weight to the prior year's actuarial value increased by expected interest and contributions and decreased by benefit payments and expenses. This is mathematically equivalent to recognizing 100% of the actuarially assumed interest rate, plus contributions, less payment each year, and 20% of the portion of each year's returns that have not already been reflected in asset values.

In the 2014 valuation there was an additional recognition of 30% of the remaining balance of past investment gains.

APPENDIX B ACTUARIAL ASSUMPTIONS AND METHODS

3. Changes Since Last Valuation

There was an additional recognition of 30% of the past investment gains in the asset smoothing method.

APPENDIX C SUMMARY OF PLAN PROVISIONS

1. Membership

The Plan covers actively-participating volunteers of one of the state volunteer fire departments, ladies auxiliaries and service organizations providing volunteer ambulance services.

2. Member Contributions

\$60.00 per member per year.

Interest is credited at the rate of 5% per year.

3. Credited Service

Service prior to July 1, 1986: one year of service for each three years of service.

Service after June 30, 1986: all service as a volunteer as certified by a fire company.

4. Normal Retirement

Eligibility: Age 60 with ten years of credited service.

Benefit: \$5.00 per year of credited service, to a maximum of \$125.00 per month.

5. Survivor's Benefit

Eligibility: Death of a member, inactive member, or retired member.

Benefit: Lump sum equal to the excess, if any, of the accumulated member contributions

with interest over the total pension payments made, if any.

6. Vesting

Eligibility: Ten years of credited service.

Benefit: Normal retirement benefit payable at age 60 based on service at date of

termination. In lieu of a pension, a member may receive a refund of accumulated employee contributions with interest. Upon application for a refund of contributions, a member's vested right to a monthly benefit shall be

forfeited.

7. Form of Payment

The normal form of payment is a single life annuity with a guarantee that at least member contributions will be paid out.

APPENDIX C SUMMARY OF PLAN PROVISIONS

8.	Changes	Since	Last	V	aluation
O.	Changes		Last	•	aiuauvii

None.
